

# CLOUDSOFT | AMP

## FOR PLATFORM TEAMS

Platform teams are challenged with delivering technology standardisation by design in a composable and consistent way. The goal - increase agility, improve resilience, and deliver golden paths to production.

To do this, you need a tool to power your internal developer platforms (IDP). One that complements your existing tech stack, overcomes its complexity, connects across all your environments including cloud, on-premise and more, and is 100% customisable to your platform needs. That tool is Cloudsoft AMP.

### ORCHESTRATE PLATFORMS

AMP, as a platform orchestrator, sits at the core of a dynamic Internal Developer Platform. AMP provides unparalleled visibility & control; all whilst ensuring resiliency and compliance across environments, regardless of technology or location.

### SUPER AUTOMATE EVERYTHING

AMP complements and strengthens all your existing tooling and tech with its out-of-the-box interoperability and advanced 'super automation' capabilities.

### POWERED BY ENVIRONMENT-AS-CODE

By codifying entities in a declarative model, AMP provides a single (and unified) control plane to design, manage, automate and govern entire environments; rapidly, consistently, resiliently, and at scale.

## HOW AMP WORKS

Recognising that agile approaches are revolutionising modern technology provision and management, AMP's concept of '**Environment-as-Code**', elevates infrastructure-as-code to a declarative shared control plane that connects Dev, Platform, Ops teams and more; allowing them to deliver, manage and orchestrate environments, platforms and services rapidly, reliably, resiliently and at scale. AMP also enables self-service, via ITSM service catalogues and more for developers needing to rapidly spin up and tear down dev/test environments with minimal effort.

**This unique approach creates composable design-time and consistent runtime models for any environment; capturing and codifying subject matter expertise, best practices, policies, processes, runbooks and more into reusable blueprints with autonomic policies attached; all completely independent of infrastructure allowing them to be deployed anywhere, consistently and without error - making golden paths and guardrails easy to create and manage.**

**EMPOWERING PLATFORM TEAMS WITH CONSISTENCY, EFFICIENCY, SCALE, CONTROL. VISIBILITY AND MORE**
