

CLCUDSOFT | TEMPO

Fast, funded cloud migration with AWS MAP (Migration Acceleration Program).

AWS' Migration Acceleration Program (MAP) helps businesses to migrate their workloads and applications to AWS quickly and efficiently.

The benefit of MAP is that it makes sure your migration is both technically sound and cost-effective. You also have the opportunity to make sure that migrating to AWS is the best choice for you, as the assessment phase can be funded by AWS. If you then decide to proceed with the migration, you can unlock even more funding.

With the help of an AWS Partner with Migration Capability, like Cloudsoft, the MAP program will:

- assess the workloads to be migrated,
- estimate the financial benefit of migrating them to AWS,
- determine migration paths and priorities,
- provide AWS funding to fund your migrated workloads. You can benefit from both credits to your AWS account and a reduced rate from your AWS partner carrying out the MAP work with you.

So, how does it work?

01

READY?

At this stage, we determine whether or not your workloads are ready to migrate. We help you identify business and technical capability gaps and help you to build a total cost of ownership model (TCO) to show the value of migrating to the cloud.

02

STEADY...

the gaps found at Stage 1 are turned into concrete actions to make your migration a success. We will also work with you to prioritise the order in which your workloads are migrated, ensuring minimal disruption and maximum benefit.

03

GO!

The migration! We migrate your workloads and make sure that the migration is a success and validated by AWS (to be eligible for funding).
