

The Cloudsoft Migrate Service migrates your applications into the AWS cloud. Our Consulting Engineers use a specialist combination of their experience, Cloudsoft and AWS patterns and practices, and Cloudsoft AMP blueprinting, deployment and management automation to Replatform your application into AWS. It sets you on the correct path for the best way to operate your application, and to ready your application for future refactoring it to continuously reduce costs, increase uptimes, respond to changing business needs and exploit the pace of AWS innovation.

Benefits

- AWS Certified Professional experts will identify the most suitable applications to start replatforming to AWS and do so according to best practices.
- A safe, easy and reliable way to transform to cloud and embrace cloud benefits, including increased agility and reduced spending.
- Easy processes for engineers to upgrade, test, and debug – or we can do it for you.

Deliverables

- Interactive workshops to Assess the right application for Replatforming.
- Replatforming Plan describing the application complexity and how it will be replatformed and managed in the AWS cloud.
- Model of the Application in a reusable Apache Brooklyn blueprint.
- Replatform (migrate) the application to AWS.
- Manage the application on AWS (additional service, see Cloudsoft Managed Run Service).

Target Audience

Application Owners need help getting their applications into AWS. This service is also great for Cloud Solution Architects and Administrators that need help ingressing applications to their AWS cloud accounts.

Roles and Responsibilities

Cloudsoft Replatforming Specialist will run the plan and provide all application and cloud expertise to deliver the replatforming

Customer needs to provide available application owners/specialists and (if available) their Cloud Administrators.

Forward plan for ongoing application management delivered jointly by Cloudsoft and Customer.

Managed Services Add-on

Some customers want to manage their own application in their own AWS accounts and just use Cloudsoft services to get them there. Other customers choose the Cloudsoft Managed Run Service to have Cloudsoft manage their application for them in the cloud.

Key Activities

Action	Responsibility
<i>Kick off</i>	All
<i>Assess Application</i>	Cloudsoft and Customer App Owner and Operations
<i>Model Application</i>	Cloudsoft (plus customer shadow)
<i>Replatform Application</i>	Cloudsoft
<i>Recommended additional service</i>	Cloudsoft Managed Service
<i>Wrap Up</i>	All

Pricing and Scope

- The standard offering is fixed price and fixed scope to one application. This standard offering can be customised to add more application and more complexity.
- One application that meets the maximum sophistication criteria for standard replatforming, more sophisticated apps may fall outside this Service offering and require custom scoping.
- Delivered by a Cloudsoft Cloud Replatforming Specialist backed up by the Cloudsoft Replatforming Team.
- We recommend the Cloudsoft Managed Run Service to run your application and add the Evolve service for more benefits.
